The subject of the present invention is the preparation of new complex and innovative dietary health-promoting compositions possessing numerous biological actions. Their main characteristics are: an energy-generating and tonic action, an immune-stimulating action, an antialcoholic action (neurohepatoprotective), an antimutagenic action, a sexual appetite-stimulating action, a geriatric action, an infarctopreventive action, finally and especially, an anticancer action. These compositions are intended for very wide public consumption, it being possible for them to be provided and marketed in the most diverse forms of dietary preparations.
